Lernziele / Kompetenzen	Study of different concepts and practices in dealing with the natural environment and discussion of selected artistic positions related to environment and nature.
Inhalte	The looming threat of climate change and environmental disasters has grown ever more evident and affects deeply many areas of (human) life. It has not only created a transdisciplinary research field but also a number of artistic strategies approaching the problem. The global environmental crisis is not only a crisis of the hardware of civilization, it is also a crisis of its software - of mindsets. In the center of such mindsets is the notion of nature. Nature as a cultural category needs revision. This seminar provides students with relevant theories, scientific findings and exemplary analyses of artistic approaches. Annemarie Bucher, Dr. sc., lic. phil. I, Senior Lecturer Bachelor Fine Arts, Co-Head MAS Art & Society (http://artandsociety.net/), Co-Director of FOA-FLUX (foa-flux.net), free lance researcher, curator, lecturer in art, cultural studies, landscape studies, intercultural exchange.
